

This AMG MySuper Product Dashboard is provided to help you understand the product's fees, performance and risk. It will assist you in comparing the AMG MySuper product with other MySuper products offered by other superannuation providers.

Return Target

To achieve an investment return of 3% pa above the Consumer Price Index over a rolling 10 year period. This is a projection and is effective 1 January 2014. Future returns cannot be guaranteed.

Return

AMG MySuper Option commenced on 1 January 2014 as a new product offering. Currently the product has no performance history.

Comparison between return target and return

This is the comparison between the return target and the return for AMG MySuper Option. The return target is measured as the expected average return above Consumer Price Index ('CPI') growth over 10 years. The comparison return is the 10 year moving average return rather than the annual net return.

As the AMG MySuper Option has less than 12 months' history, there is no moving average return and therefore no comparison over the last 10 years.

Level of investment risk

The Investment Risk label for the product is **high**. This is based on the Standard Risk Measure developed through industry guidelines which allows members to compare investment options. This means that in any 20 year period, the chance of a negative annual return is 4 years. This is a projection.

Statement of fees and other costs

If your balance was \$50,000, then for that year you will be charged fees of **\$560** for the MySuper product. Fees and costs may not necessarily be the same in future financial years.
